

Philosophy of Science

Isaac Wilhelm (iwillhelm@nus.edu.sg, isaacwilhelm.com)

PH4201

Mon 12-2:30pm, AS4-0118, Spring 2026

Office hours: Mon 11am-12pm and by appt, AS3 05-04

Course Description

Empirical science is an incredibly successful area of inquiry. In physics, biology, economics, and many other areas of science, we have learned a staggering amount about the world. In spite of this success—or perhaps, in part, because of it—science has been subjected to lots of criticism. Politicians, the humanities, the general public, and scientists themselves have criticized it: they have questioned scientific methods of inquiry, the objectivity of scientific investigation, the kind of knowledge achieved by various fields of science, and more.

In this course, students will explore philosophical questions concerning science and various criticisms of it. How, exactly, do scientific theories get confirmed? In what ways do facts about probability, and facts about typicality, figure in scientific reasoning? Is science objective? What justifies inductive reasoning as it is used in science? Do the entities posited by scientific theories actually exist? As we explore these general issues, we will touch upon issues that are specific to various sub-fields of science: we will explore philosophical questions relating to biology, feminist science, quantum mechanics, and more.

Course Requirements

1. Participation (100 points).
 - Students are expected to ask questions, attend all lectures, and occasionally work together in small groups.
 - See the course website for the rubric which I use to grade participation.
2. Quizzes (10 points each; 10 quizzes total).
 - Due dates: from the first course meeting on, take a 5 minute reading comprehension quiz on the assigned article.
 - Your lowest quiz grade is replaced by a 10.
3. Final paper exam (100 points).
 - Due date: April 6 at 12pm.
 - In-person exam, which consists of writing a paper about a selection from the course readings.
 - A few weeks before April 6, a detailed description of this will be posted to the course website.

For information about various course policies—for instance, the late assignment policy, the grade appeals policy, and the make-up work policy—see the course websites.

Learning outcomes

By this course's conclusion, you should be able to

- describe several key issues in the philosophy of science,
- construct arguments in support of your views,
- present views that differ from yours in a fair and charitable manner,
- write clearly, and
- discuss complex philosophical ideas respectfully.

Plagiarism and Academic Integrity

Please adhere to the NUS policies on plagiarism and academic integrity. Penalties for violations of these policies can be severe: they include an automatic failing grade for the course, and possibly worse. A comprehensive overview of these policies can be found here:

<https://www.nus.edu.sg/celc/programmes/plagiarism.html>

Accessibility

This class should be a great, fun, and educational experience for everyone. And of course, everyone deserves equal access to all educational opportunities at NUS. Those with disabilities are encouraged to speak with me if that would be helpful, and to avail themselves of the services provided by the Disability Support Office

<https://nus.edu.sg/osa/student-services/student-accessibility-unit>

Schedule

The readings are drawn from several sources: articles, websites, and selections from books. All readings are required. And all are posted on the course's Canvas website.

In the schedule below, I list the requirements for each week. The requirements include attending lectures, reading literature, taking short quizzes, and taking a final exam. Note that the readings, for any given week, should be completed before the lecture in that week.

Announcements about changes in the readings—if they occur—will be made in class, and only later added to the syllabus. You are responsible for knowing about those changes.

Jan 12: Introduction, and Confirmation

Readings

- “Two Dogmas of Empiricism” (Quine).
- “Logic and Arguments” (Wilhelm).

Jan 19: Confirmation

Readings

- “Studies in the Logic of Confirmation (I.)” (Hempel).

Jan 26: Objectivity and Subjectivity

Readings

- “Values and Objectivity” (Longino).

Feb 2: Objectivity and Subjectivity

Readings

- “Feminist Philosophy of Science: Values and Objectivity” (Crasnow).
- “Standpoint Epistemologies of Science,” pp. 131–148 (Potter).

Feb 9: Induction

Readings

- “Section IV: Sceptical Doubts concerning the Operation of the Understanding” (Hume).
- “The New Riddle of Induction,” pp. 59–66 (Goodman).

Feb 16: Induction

Readings

- “The New Riddle of Induction,” pp. 66–83 (Goodman).
- “Prospects for a Theory of Projection,” pp. 84–108 (Goodman).

Mar 2: Philosophy of Physics

Readings

- “Humean Supervenience” (Loewer).

Mar 9: Philosophy of Physics

Readings

- “A Modest Proposal Concerning Laws, Counterfactuals, and Explanations,” Chapter 1 (Maudlin).

Mar 16: Probability and Typicality

Readings

- “A Subjectivists’ Guide to Objective Chance” (Lewis).
- “Humean Supervenience Debugged” (Lewis).

Mar 23: Probability and Typicality

Readings

- “Typical” (Wilhelm).
- “The Typical Principle” (Wilhelm).

Mar 30: Visiting Speaker, Eugene Chua

Readings

- TBD (Chua).

April 6: Final Paper (no lecture)

- This is a 2.5 hour exam. You will write a paper—several pages long—on one of three different selections from the course readings.
